INTRODUCING A NEW ERA IN A.O.G.

JET X A.R.T. ~ AIRFIELD RESPONSE TEAM

Now more than ever in the airline industry, time is money. And every moment an airplane is out of service is a drain on the carrier's bottom line. Now with the Airfield Response Team (A.R.T.) from Jet X Aerospace you can get your planes off the ground and back in the air faster than ever before.

THE WAY IT WAS

In what we like to call "the old days," when a component on an airplane failed a purchasing agent would have to search through a list of competing vendors to find a part. After several phone calls and e-mails stirred up the market, the agent might find a vendor who has the part in stock in some remote warehouse, across the country from where the a part is needed. They must then determine the fastest, most economical way to get the part to the awaiting maintenance crew. Then the shippers get into the action; sending the part by truck, by plane, or by overnight shipper to the final destination, hoping for no delays. And you know that each one will add their piece to the final cost. Finally, the part reaches the airfield and a technician can make the needed repair.

Meanwhile, the technicians, the plane and your passengers sit and watch time go by.

THE WAY IT CAN BE

Jet X's Airfield Response Team (A.R.T.) operates within the secure boundaries of the airfield, an idea so advanced we are awaiting a patent from the U.S. government. The trucks are equipped with complete mobile communications, connecting your purchasing and maintenance crews to the A.R.T.s. Purchasers are able to immediately identify if a part is on-hand directly on the airfield where the aircraft is grounded. If so, one call can dispatch an Airfield Response Team member with the part straight to the technician. Repairs can be made quicker, shipping costs can be cut, and passengers can be in the air, not at the gate making other arrangements.

Jet X Airfield Response Teams (A.R.T.) can be custom-fitted to your airlines specific needs. Requests can be as simple as standing purchase orders for aviation lubricants to complete Airfield support.

This revolutionary service provides carriers immediate access to the most critical components on your most common flying stock. Why settle for close enough when you can have your parts close-at-hand?

HOW IS THIS POSSIBLE

Jet X Aerospace is committed to carrying the largest stock of parts and supplies needed to eliminate downtime. And in order to efficiently meet this demand, we've established strategic relationships with O.E.M.s and repair facilities, and forged marketplace alliances:

- Parts suppliers bring their critical stock to the airfield, closer to their end users
- Repair facilities can offer customers an additional level of personal service, immediate CORE returns, and faster turnaround.
- Expendable and Consumables are no exception. Imagine placing a standing purchase order for ExxonMobil lubricants, ensuring that your crews would never run dry, without hassles or costly skid storage

These are just a few examples of the value that Jet X A.R.T can bring to your carrier. Common sense is a strong indicator of the right choice. Be the first to bring this resource to your team and quickly gain the edge over your competition.

SUPERIOR SERVICE

At Jet X, we didn't sacrifice service to bring you speed and savings. Our 24-hour live A.O.G. Command Center can work with you to find exactly the part you need, or even monitor your inventory needs.

Our A.R.T. team members work directly with your ground crews, building trust and understanding. A true partner experiencing the stress of A.O.G. together, and with the right planning and resources, eliminating as many costly situations as possible.

In today's competitive market, don't get caught behind the times. Join the new era with Jet X Aerospace Airfield Response Team.
